Why Is It Important to Use Environmentally Preferable Products?

- A single janitorial worker uses, on average, between 194–234 lbs. of chemicals annually, approximately 25% of which are hazardous substances.

- Janitorial workers experience one of the highest rates of occupational asthma.

- 6 out of 100 janitors are injured each year:
  - 20% are serious burns to the eyes or skin
  - 12% are a result of chemical fumes

Children and Toxins

- Children are at greater risk than adults when exposed to toxins because
  - They are exposed at higher levels
    - Eat more food, breathe more air, drink more water
    - Play closer to the ground, hand-to-mouth activity
  - They metabolize and eliminate toxins more slowly than adults
  - Their rapidly developing systems are more sensitive
Children and Toxins

- Childhood exposures to industrial chemicals in the environment can:
  - Cause cancer
  - Damage the developing brain
  - Lead to
    - autism
    - attention deficit disorder (ADD)
    - learning disabilities
    - mental retardation

Toxins in Schools

- 20% of the US population occupy elementary and secondary schools
- In 1999, the Department of Education rated the IAQ in 1 of almost every 5 public schools as unsatisfactory*
- Learning, developmental and behavioral disabilities in children affect an estimated 10% of children

Asthma In New England

- New England has one of the highest rates of asthma as a region*
- Residents who have been diagnosed in their lifetimes*
  - 14% of children
  - 15% of adults
- Current rates in the NE states*
  - CT – 8.7% of children, 9.7% adults
  - NH – 8% of children, 10.3% of adults
  - ME – 10.7% of children, 9.6% of adults
  - VT – 8.1% of children, 8.5% of adults

Children and Asthma

- 1 out of every 13 school-age children has asthma
- Childhood deaths due to asthma have tripled in the past 15 years
- 1 in 20 children has been hospitalized overnight for asthma
- Asthma is the primary cause of missed school days, over 1 million per year
- Asthma costs society $16 billion per year in medical and indirect costs
Disinfectants & Sanitizers

- Chlorine / Sodium Hypochlorite
  - Very effective antimicrobial
  - Corrosive to eyes and skin
  - Damages floor finishes, carpets, clothing, etc.
  - Respiratory irritant
  - Environmental concerns from production, contaminants, byproducts
  - Mixing can create poisonous gas

- Phenols
  - Effective against TB – HBV assumed
  - Corrosive to eyes and skin
  - Damage floor finishes and other surfaces
  - Strong pungent odor – respiratory irritant
  - Environmental concerns. Possible estrogen mimic.

- Quats
  - Typically not proven effective against spores
  - Less toxic than Phenols – eye, skin and surface corrosivity
  - Toxic to aquatic life

- Peroxide
  - EPA Sanitizer
  - Superior health & environmental profile compared to phenols and quats
